Since your bond is likely higher than it needs to be based on your proximity to cities where we could get equipment to reclaim if we had to forfeit the bond, you can disregard the statement that \$1000 per acre of additional bond will be required.

In the future, if there are significant regraded areas that are unvegetated, we may need to ask you for more bond to cover revegetation work. We will evaluate that potential need in the future.

Hi Brook,

Attached are two possible Operation maps plotted at different scales, one of which might be more helpful to you than the other. When you send us your NOI paperwork, please also include the Location map sent earlier this week and one of the two attached maps.

Here is some guidance for filling out the Operation map. Don't hesitate to ask questions as needed. Add to the map (or to a map of your own if you prefer) the following:

### 2.11. The area to be disturbed;

Draw on the map the maximum acreage you want to be able to disturb and label it. This can be as many acres as you want (such as the entire ~37 acre lot), but based on your plans and bond costs, only a set number of acres (up to 10 acres max) will be permitted to be disturbed at any one time.

Also, the Division will need to hold \$1000 per acre of bond for regraded acres that don't have acceptable vegetation growing yet, so that should be considered in the bond. Usually it takes 2 or 3 years for the vegetation to grow in, if the seeding is done right, and to meet the Division requirements for amount of vegetation.

### 2.12. The location of any existing or proposed operations including access roads, drill holes, trenches, pits, shafts, cuts, or other planned small mining activities; and

Draw on the map the approximate boundary of the **current** acreage that MKJ Construction has already disturbed. Identify topsoil piles, pits, and access roads, as applicable and logical.

**2.13. Any adjacent previous disturbance for which the operator is not responsible.** (Identify any disturbances that you aren't responsible for. A note on the map or in the text could help clarify the nature of it, or whether there is any previous disturbance or not. MKJ Construction will not be responsible for previous disturbance unless you re-disturb it.)

Peter
